Supplementary Table 3.1. List of candidate genes based on CDS estimation of Tajima's D (using outlier values) or MK test (using G test significance). CDS are selected based on consistencies of this parameters across 5 or more group of samples (8 total). Bolded CDS represent genes of interest involved in reproductive isolation and or timing traits. Chromosome number: 1 represents the sex chromosome, subsequent numbers represent different autosomes. Zero represents unassigned chromosome for that CDS.
